

Name: Arhaan Hussain Khan

PRN: 25070122045

Division: A2

ASSIGNMENT No: 13

TITLE: Write a Java program to perform reading from and writing to a file using file handling operations.

Problem Statement: Write a Java program to perform reading from and writing to a file using file handling operations.

Learning Objectives: To perform file reading and writing operations using Java file handling classes.

Theory: Java provides file handling through the java.io package. Classes such as File, FileReader, FileWriter, BufferedReader, and BufferedWriter are used to perform input and output operations. File handling enables permanent storage and retrieval of application data. Proper exception handling is necessary to manage file-related errors. These concepts are essential for data persistence.

Exercise:

1. Create a program to write and read employee details from a file.

Program:

```
main.java > EmployeeFile
1  import java.io.*;
2
3  class EmployeeFile {
    Run | Debug
4      public static void main(String[] args) throws Exception {
5          FileWriter fw = new FileWriter(fileName: "employee.txt");
6          fw.write(str: "Employee ID: 101\n");
7          fw.write(str: "Name: Arhaan\n");
8          fw.write(str: "Department: IT\n");
9          fw.write(str: "Salary: 50000\n");
10         fw.close();
11
12         BufferedReader br = new BufferedReader(new FileReader(fileName: "employee.txt"));
13         String line;
14         System.out.println(x: "Employee Details:");
15         while ((line = br.readLine()) != null) {
16             System.out.println(line);
17         }
18         br.close();
19     }
20 }
```

Output:

```
PS C:\Users\arhaa\OneDrive\Desktop\java> c:\
onMessages' '-cp' 'C:\Users\arhaa\AppData\Ro
Employee Details:
Employee ID: 101
Name: Arhaan
Department: IT
Salary: 50000
PS C:\Users\arhaa\OneDrive\Desktop\java>
```

2. a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

Program:

```

J main.java > PatientFile
1  import java.io.*;
2
3  class PatientFile {
    Run | Debug
4      public static void main(String[] args) throws Exception {
5          FileWriter fw = new FileWriter(fileName: "patient.txt");
6          fw.write(str: "Patient ID: P101\n");
7          fw.write(str: "Name: Rahul\n");
8          fw.write(str: "Age: 25\n");
9          fw.write(str: "Diagnosis: Fever\n");
10         fw.close();
11
12         BufferedReader br = new BufferedReader(new FileReader(fileName: "patient.txt"));
13         String line;
14         System.out.println(x: "Patient Details:");
15         while ((line = br.readLine()) != null) {
16             System.out.println(line);
17         }
18         br.close();
19     }
20 }

```

Output:

```

PROBLEMS 3 OUTPUT DEBUG CONSOLE TERMINAL PORTS
PS C:\Users\arhaa\OneDrive\Desktop\java> & 'C:\Program Files\Java\j
ng\Code\User\workspaceStorage\02e7f2cfce92a0ba8e30606ade6b2c24\redha
Patient Details:
Patient ID: P101
Name: Rahul
Age: 25
Diagnosis: Fever
PS C:\Users\arhaa\OneDrive\Desktop\java>

```
