CSE- Academic Year 2026-27

Java Programming – Lab Batch 2025-29

Lab Assignment No:- 18	
Name of Student	**Arhaan Hussain Khan**
PRN No.	**25070122045**
Batch	**A-2**
Class	**Second Year**
Academic Year & Semester	**26-27 & 3rd Sem**
Date of Submission	30/8/2026
Title of Assignment:	**Write a Java GUI program to demonstrate button click event handling**

Practice questions
 	
Output Screenshots Solve questions on given link and attach screen shot of leetcode with your login and o/p
	1. Create a GUI calculator where buttons perform addition and subtraction.
	
	import javax.swing.*;
	
	import java.awt.*;
	
	public class Calculator {
	  public static void main(String[] args) {
	  JFrame frame = new JFrame("Simple Calculator");
	
	  JTextField num1 = new JTextField();

```
JTextField num2 = new JTextField();
JTextField result = new JTextField();
result.setEditable(false);

JButton add = new JButton("+");
JButton subtract = new JButton("-");

frame.setLayout(new GridLayout(4, 2, 10, 10));

frame.add(new JLabel("First Number:"));
frame.add(num1);

frame.add(new JLabel("Second Number:"));
frame.add(num2);

frame.add(add);
frame.add(subtract);

frame.add(new JLabel("Result:"));
frame.add(result);

add.addActionListener(e -> {
   int a = Integer.parseInt(num1.getText());
   int b = Integer.parseInt(num2.getText());
   result.setText(String.valueOf(a + b));
});
```

```
        subtract.addActionListener(e -> {
            int a = Integer.parseInt(num1.getText());
            int b = Integer.parseInt(num2.getText());
            result.setText(String.valueOf(a - b));
        });

        frame.setSize(400, 250);
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        frame.setVisible(true);
    }
}
```

2. Create a Bank Balance Calculator GUI application using Java Swing where the user enters the initial balance and transaction amount. Use buttons to perform addition (deposit) and subtraction (withdrawal) and display the updated balance.

```
import javax.swing.*;
import java.awt.*;

public class BankBalanceCalculator {
    public static void main(String[] args) {
        JFrame frame = new JFrame("Bank Balance Calculator");

        JLabel balanceLabel = new JLabel("Initial Balance:");
        JLabel amountLabel = new JLabel("Transaction Amount:");
        JLabel resultLabel = new JLabel("Updated Balance:");
```

```
        JTextField balanceField = new JTextField();
        JTextField amountField = new JTextField();
        JTextField resultField = new JTextField();
        resultField.setEditable(false);

        JButton deposit = new JButton("Deposit");
        JButton withdraw = new JButton("Withdraw");

        frame.setLayout(new GridLayout(4, 2, 10, 10));

        frame.add(balanceLabel);
        frame.add(balanceField);
        frame.add(amountLabel);
        frame.add(amountField);
        frame.add(deposit);
        frame.add(withdraw);
        frame.add(resultLabel);
        frame.add(resultField);

        deposit.addActionListener(e -> {
            double balance =
Double.parseDouble(balanceField.getText());
            double amount =
Double.parseDouble(amountField.getText());
            resultField.setText(String.valueOf(balance + amount));
```

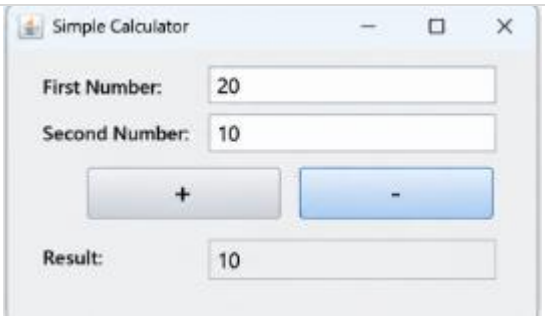

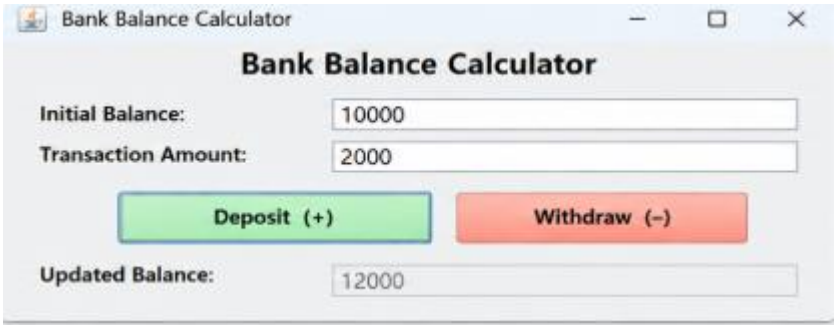

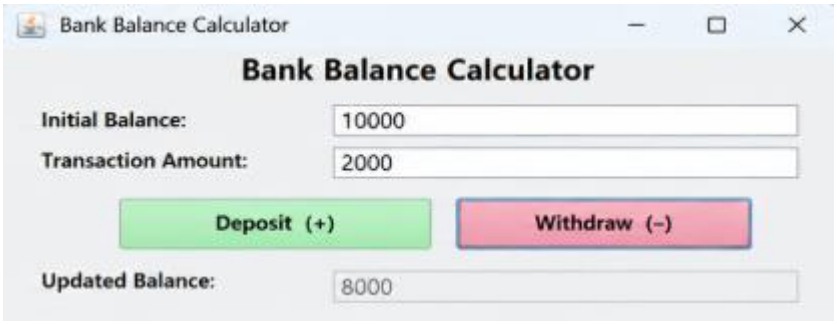

```
        });

        withdraw.addActionListener(e -> {
            double balance =
Double.parseDouble(balanceField.getText());
            double amount =
Double.parseDouble(amountField.getText());
            resultField.setText(String.valueOf(balance - amount));
        });

        frame.setSize(450, 250);
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        frame.setVisible(true);
    }
}
```

Output Screenshots (if applicable)

	  
Conclusion	The program successfully demonstrates a Bank Balance Calculator using Java Swing. It accepts the initial balance and transaction amount, and uses Deposit and Withdraw buttons to perform addition and subtraction. The updated balance is then displayed in the GUI.
